Program: "Breast Cancer Screening, Diagnostics, and Navigation Resource & Access Program"

Program Summary:

The priorities for our innovative program will be to provide no-cost breast cancer screening and diagnostic services for the uninsured and underinsured population of El Dorado County. Our Program will identify and screen the eligible population for the various programs available and then utilize awarded grant funds to pay negotiated rates for screening and diagnostic services for patients that do not qualify for other programs. Our goal is to provide, coordinate and monitor results of screening and diagnostic mammograms, breast ultrasounds, breast MRI, as well as offering gas cards to increase access to care for screening and treatment for patients living in remote areas of our county.
